The American Association for Teaching and Curriculum

In June of 1995, John Laska, first secretary-treasurer of AATC, described the development of the scholarly field of teaching and curriculum as follows:

In the United States, most areas of scholarly investigation emerged as recognized fields of study about a hundred years ago. One of the events that made this possible was the founding of national learned societies devoted to the advancement of scholarship in their respective fields. Some examples of these learned societies are the American Historical Association (1884), the American Economic Association (1885), the American Philosophical Association (1901), the American Political Science Association (1903), and the American Academy of Religion (1909).

The scholarly field of teaching and curriculum, however, was not represented in the transformation of American scholarship that began during the latter half of the nineteenth century, even though university departments that encompassed both the scholarly and the professional study of teaching and curriculum had been established prior to the end of the nineteenth century.

An important recent event in the development of the scholarly field of teaching and curriculum was the founding of the American Association for Teaching and Curriculum (AATC) on October 1, 1993. The members of the AATC believe that the time is long overdue to recognize teaching and curriculum as a basic field of scholarly study.

Article I, Section 2 of The Constitution of the American Association for Teaching and Curriculum states that the purposes of the organization shall be:

To constitute a national learned society for the scholarly field of teaching and curriculum (teaching is the more inclusive concept; curriculum is an integral part of teaching—the “what-to-teach” aspect). In the larger universities, faculty members identified with this field of scholarly study are typically affiliated with departments of curriculum and instruction, teacher education, and elementary and secondary education.

To promote the scholarly study of teaching and curriculum. All analytical and interpretive approaches that are appropriate for the scholarly study of teaching and curriculum shall be encouraged.

This Third Annual Conference of the AATC is dedicated to advancing these concepts of the organization and its purposes.
